"System and Method for Automatic Information

Compatibility Detection and Pasting Intervention"

ABSTRACT OF THE DISCLOSURE

5      [0103]    Content is transferred from one computer resource to another computer

resource by receiving designating a first insertion point, enabling automatic paste

operation, switching to a user interface to a source computer resource, receiving a

user selection of content from said source user interface, and automatically copying

the selected content to a transfer buffer and to the designated insertion point(s) in the

10     destination computer resource.   Additional content may be copied to the destination

computer resource by simply selecting additional content in the same source computer

resource or other computer resources without need to toggle back to the destination

user interface between every copy and paste operation.   Prior to insertion in the

destination computer resource, compatibility of the content is checked, and

15     incompatible elements are handled according to user configured rules, such as

converting the elements, converting the elements, or isolating the elements.
